

RavenStack SaaS Churn, Retention & Activation Dashboard

Executive Overview

This analysis evaluates the structural sustainability of Ravenstack's growth as the B2B SaaS company scales its SMB, Mid-Market, and Enterprise tiers. The team should set a quarterly target to bring account churn below 8% and have Product + Customer Success jointly own the reduction, rather than treating churn as a Customer Success-only problem

RavenStack SaaS Churn, Retention & Activation Dashboard

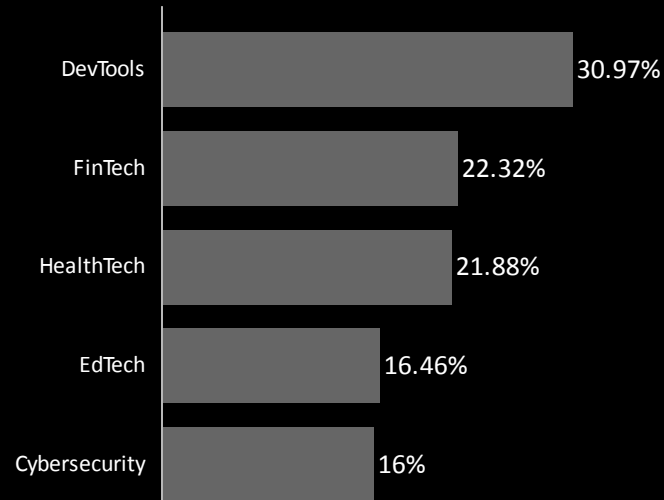

Churn & Customer Segment Analysis

The immediate action should be to review the onboarding journey and top support complaints for DevTools customers, then introduce targeted intervention before renewal; reducing DevTools churn even by 5 percentage points would be a much more focused growth lever than applying generic retention campaigns across the entire customer base.

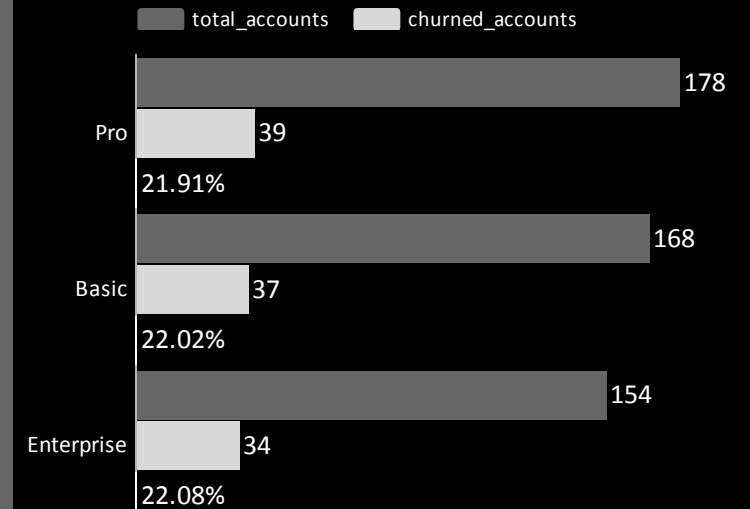

Churn Reasons

RavenStack SaaS Churn, Retention & Activation Dashboard

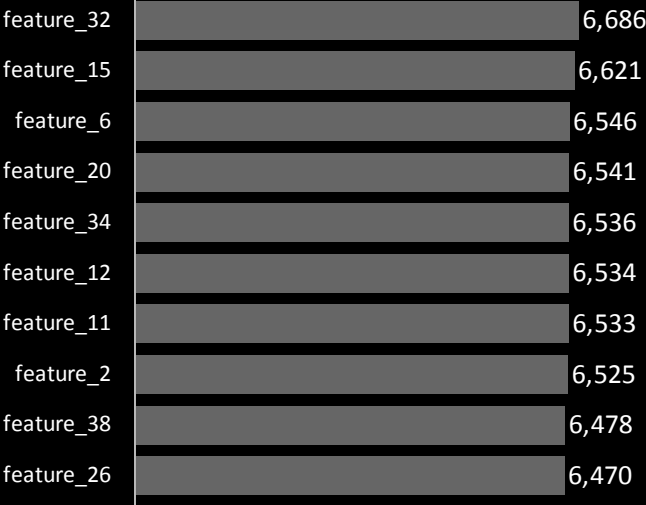

Activation & Product Usage Analysis

The Product team should stop treating all feature usage equally and run an activation experiment around the behaviours associated with the strongest retention, particularly testing whether getting new customers to adopt the highest-retention features during their first 7 days improves downstream retention, the result should become a formal activation milestone in onboarding.

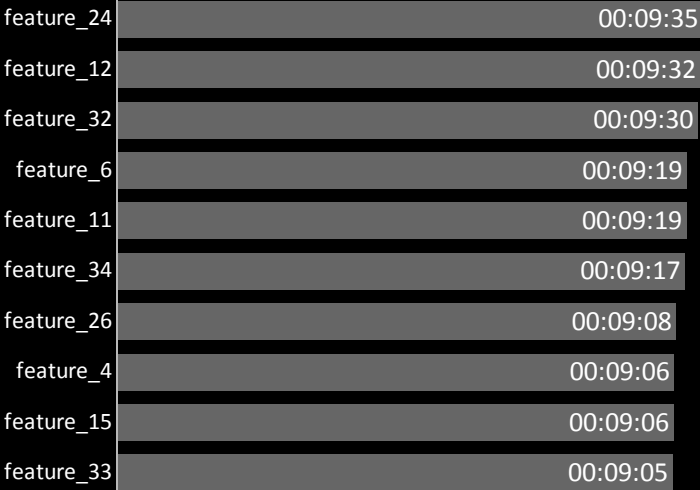

Activation vs. Churn

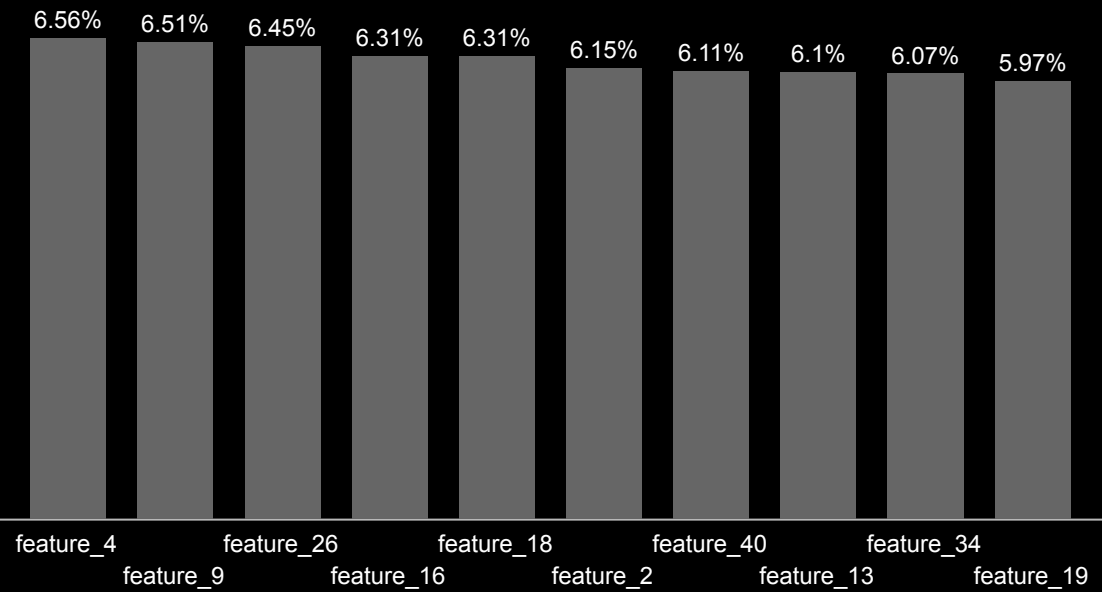

Feature Usage

9.	feature_35	9	7	77.78%

RavenStack SaaS Churn, Retention & Activation Dashboard

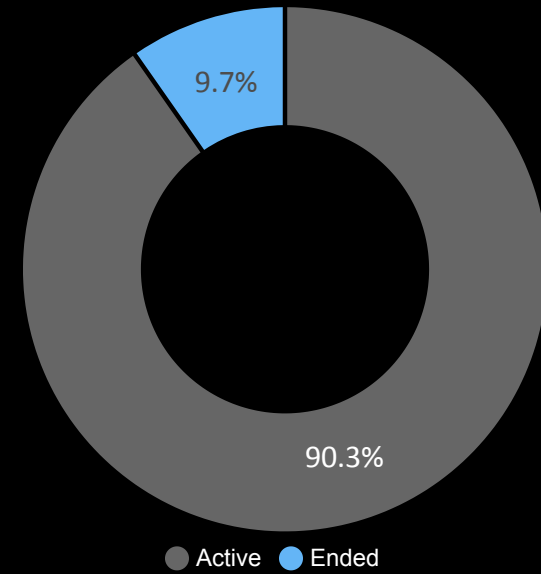

Cohort & Retention Analysis

The team should introduce a 30/60/90/180-day retention program that flags customers showing declining engagement before the cohort reaches that later-stage drop-off; this shifts the strategy from reacting to churn after cancellation to identifying the point in the customer lifecycle where RavenStack begins losing product value.

Customer Support & Churn Indicator Analysis

The team should make post-ticket feedback capture a core support KPI and prioritize customers with repeated tickets plus no feedback, particularly among high-support-load plans; this would turn the current “silent churn” signal into an early-warning system for Customer Success.

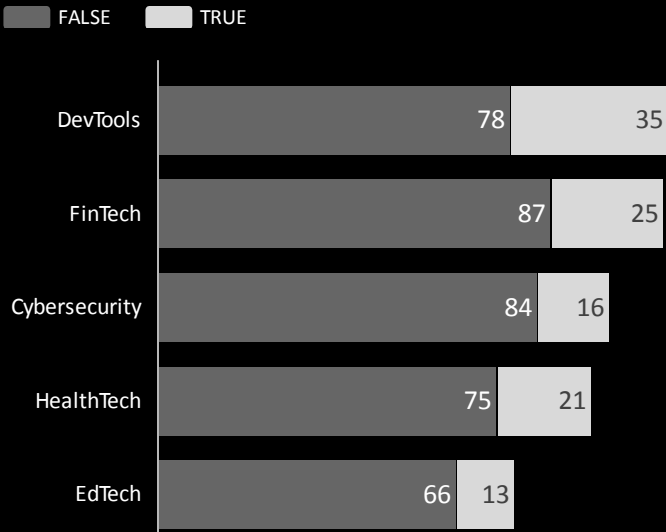

Support Load by Plan

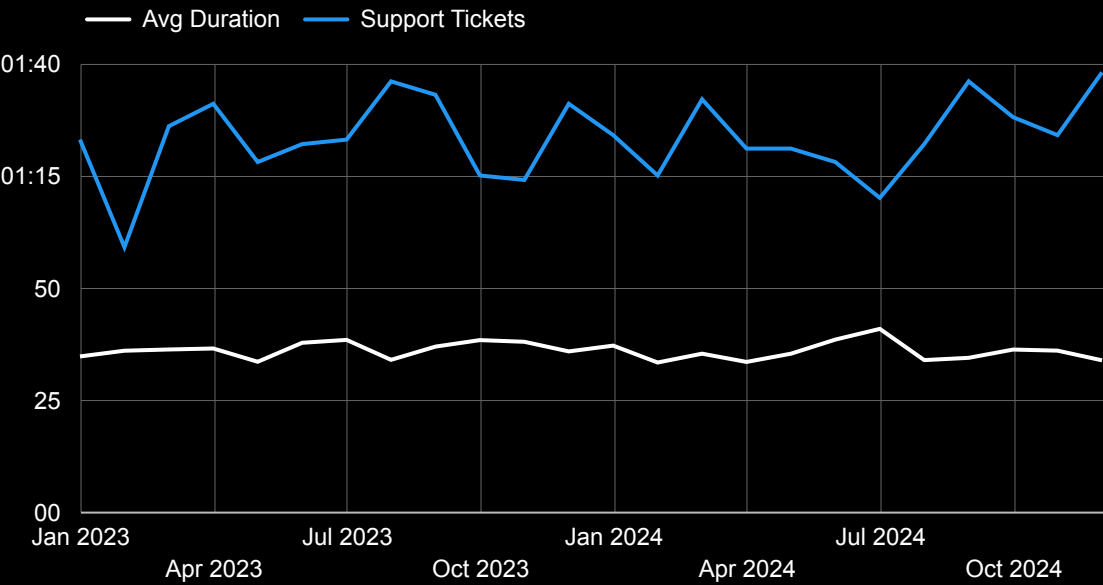

Customer Satisfaction Distribution
